--- Day 9: Stream Processing ---

A large stream blocks your path. According to the locals, it's not safe to cross the stream at the moment because it's full of garbage. You look down at the stream; rather than water, you discover that it's a stream of characters.

You sit for a while and record part of the stream (your puzzle input). The characters represent groups - sequences that begin with [] and end with []. Within a group, there are zero or more other things, separated by commas: either another group or garbage. Since groups can contain other groups, a [] only closes the most-recently-opened unclosed group - that is, they are nestable. Your puzzle input represents a single, large group which itself contains many smaller ones.

Sometimes, instead of a group, you will find garbage. Garbage begins with \leq and ends with \geq . Between those angle brackets, almost any character can appear, including $\{$ and $\}$. Within garbage, \leq has no special meaning.

In a futile attempt to clean up the garbage, some program has canceled some of the characters within it using !: inside garbage, any character that comes after !! should be ignored, including $[\cdot]$, $[\cdot]$, and even another !!.

You don't see any characters that deviate from these rules. Outside garbage, you only find well-formed groups, and garbage always terminates according to the rules above.

Here are some self-contained pieces of garbage:

- <>, empty garbage.
- <random characters>, garbage containing random characters.
- <<<>>, because the extra < are ignored.
- $-\langle\{!\rangle\rangle$, because the first \triangleright is canceled.
- <!!>, because the second ! is canceled, allowing the > to terminate the garbage.
- <!!!>>, because the second ! and the first > are canceled.
- <{o"i!a.<{i<a>}. which ends at the first >.

Here are some examples of whole streams and the number of groups they contain:

```
- {{}, |1 group.
- {{{}}}, |3 groups.
- {{}}, {{}}, |a so |3 groups.
- {{}}, {{}}, {{}}}, |b groups.
- {{}}, {{}}, {{}}}, |b groups.
- {{}}, {{}}, {{}}}, |b group (which itself contains garbage).
- {{}}, {{}}, {{}}, |b group.
- {{}}, {{}}, {{}}, {{}}, {{}}, {{}}}, |b groups.
- {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}}, {{}},
```

Your goal is to find the total score for all groups in your input. Each group is assigned a score which is one more than the score of the group that immediately contains it. (The outermost group gets a score of $\boxed{1}$.)

```
- {{}}, score of [].
- {{{}}}}, score of [] + 2 + 3 = 6].
- {{}}, {}}, score of [] + 2 + 2 = 5].
- {{{}}, {}}}, score of [] + 2 + 3 + 3 + 4 = 16].
- {{a}, {a}, {a}}, score of [].
- {{ab}}, {{ab}}, {{ab}}, {{ab}}}, score of [] + 2 + 2 + 2 + 2 + 2 = 9].
- {{!}}, {{!}}, {{!}}, {{!}}}, score of [] + 2 + 2 + 2 + 2 + 2 = 9].
- {{a!}}, {{a!}}, {{a!}}, {{ab}}}, score of [] + 2 + 2 + 2 + 2 + 2 = 9].
```
